5 Years

Product Description

The 400mm shower arm is a uni directional style shower arm. It has been designed to allow much greater height or length for the positioning of the shower rose than traditional 250mm uni directional shower arms.

The 400mm shower arm incorporates a ratchet locking mechanism allowing the shower arm to take larger shower roses enabling the installation of modern rain shower roses.

Designed to be compatible with most shower roses that have a 1/2 inch female fitting, it fits onto a standard 1/2 male wall outlet. The shower arm can also be installed whilst straight, allowing installation in narrow showers. No drilling is required during installation.

The 400mm shower arm is the ideal shower arm for use when replacing an existing shower on an 1800mm outlet height to give the extra height required for a larger shower rose.
