- No drilling required
- Easy to install

Finishes

Chrome, Raw Brass, Gold, Matt Black
White & Ivory

Warranty

5 Years

Product Description

The shower divertor is a universal divertor designed to convert an existing wall mounted shower into a combination shower system with hand shower. No drilling is required during installation.

The shower divertor is easily installed by simply removing the existing shower, fitting the divertor then re-installing the existing shower onto the divertor.

Designed to be compatible with the Auscan 712 and 713 range of shower hoses, as well as most wall mounted showers with a ½ inch female fitting.

When used with the HH15 Suction Cup Shower Bracket it will create a combination shower system that does not require any drilling, enabling it to be used in a temporary capacity (i.e. aged or health care) or where permanent modifications to the shower are not allowed (i.e. rental properties).

Specification

The shower divertor shall be Auscan Imports HH8 Shower Divertor in xxx finish
